

Setting Up WebDAV in Windows 7

You can use WebDAV to access your CityTech Hdrive and Share Folders.

Connecting to your Share Folder with CityTech account via WebDAV

To connect to your CityTech account via WebDAV on Windows 7, follow these steps:

1. From the Windows Start menu, click **Computer**.

2. Within the Computer window that appears, click **Map network drive**.

3. Within the Map Network Drive dialog, enter your WebDAV address:

H: Drive Folder

`https://netdrive.citytech.cuny.edu/HomeDir`

4. Click the two check boxes at the bottom.

5. Click **Finish**.

6. Enter your CityTech UserID name and password.

NYCCT\UserID

7. Click the **Remember my credentials** checkbox.

WARNING: This will Leave Connection Remnant's on Local Machine, making it Easier to reconnect in the future. This will leave your data vulnerable if you do this on a public computer. Use Web connection for public computer file access.

8. Click the **OK** button.

Now you should see a WebDAV drive that you can expand to view folders and files.

Setting Up WebDAV in Mac OS X

You can use WebDAV to access your CityTech Hdrive and Share Folders.

Connecting to your Share Folder with CityTech account via WebDAV

To connect to your AD account via WebDAV on Mac OS X, follow these steps:

1. In the Finder, click **Go > Connect to Server**, or press **Cmd + K** on the keyboard.
2. In the **Server Address** field, enter your WebDAV address: *http://your_site_url/resources*

H: Drive Folder
<https://netdrive.citytech.cuny.edu/HomeDir>

3. Click **Connect**.
4. If prompted, click **Continue**.

5. In the Verify Certificate dialog, select **Registered user** and enter your CityTech User ID and password.

6. Select **Remember this password in my Keychain** if you want to store your user name and password on your computer.

WARNING: This will Leave Connection Remnant's on Local Machine, making it Easier to reconnect in the future. This will leave your data vulnerable if you do this on a public computer. Use Web connection for public computer file access.

7. Click **Connect**.

Setting Up WebDAV in Windows 10

You can use WebDAV to access your CityTech Hdrive and Share Folders.

Connecting to your Share Folder with CityTech account via WebDAV

To connect to your AD account via WebDAV on Windows 10, follow these steps:

1. Display the Windows File Explorer. To display File Explorer, you can right click over the Start button and select **File Explorer**, or you can search for File Explorer by pressing the Windows key + S.
2. From the File Explorer, right click over **This PC** or **Computer** within the navigation pane on the left.
3. From the pop-up menu that appears, select **Add network location**.

4. Within the Add Network Location Wizard, click the **Next** button.
5. On the next screen, click the **Choose a custom network location** option then click the **Next** button.

6. In the **Internet or network address** box on the next screen, enter *http://your_site_url/resources*

H: Drive Folder

`https://netdrive.citytech.cuny.edu/HomeDir`

7. Click the **Next** button.
8. When prompted, enter your CityTech AD user name and password, and check the **Remember my credentials** checkbox.

9. Click the **OK** button.

WARNING: This will Leave Connection Remnant's on Local Machine, making it Easier to reconnect in the future. This will leave your data vulnerable if you do this on a public computer. Use Web connection for public computer file access.

- When prompted, enter a name for your WebDAV connection (e.g. CityTech.cuny.edu/HomeDir) then click **Next**.

- Click **Finish**.

Now you should see a WebDAV drive that you can expand to view folders and files in your Citytech AD account.
