Dear Prospective Student,

My name is Professor Renata Budny, the Chair of the Department of Restorative Dentistry at the New York City College of Technology, CUNY and I sincerely hope you are enjoying your time learning about dental laboratory technology program at City Tech.

Did you know that the average American College student changes his/her major three times before completing his/her first degree? You might be exploring your options and looking for a career that matches your skills and abilities. In the health profession, there are over 300 specialties you can choose from. To pick one of them is a daunting task that requires a great deal of time and effort. That's way I would like to interest you in exciting career path I and other like me found in Dental Laboratory Technology. In the dental technology profession, there are about 40,000 highly skilled individuals who have mastered the art, science and technology of dental prosthetic design and fabrication.

Our program at City Tech is the first, the largest and the most recognized dental technology program in the country. By City Tech standards we are a mall program with about 100 students and 20 faculty and stuff. The advantage of being such a smaller department is that you get a chance to have one-on-one interaction with each and every student enrolled in the program.

If you enjoy helping others in need, have artistic abilities with attention to detail and enjoy challenging your creative side, then this career may be just what are you looking for in a future profession. I almost forgot to mention our exciting transition into digital manufacturing. If you like new technologies, computer design or video games, you are going to love our CAD/CAM courses where students design teeth on computer software and manufacture using cutting edge technology.

Please call our department at 718-260-5137 and ask for Josephine Glennon or speak to one of our faculty members. We would love to show you what we are all about and provide you with the opportunity to spend time in our classrooms.

You never know, this one decision might open your life and career to new opportunities you never thought of before. I hope to hear from you soon.

Sincerely,

Prof. Renata Budny,  
Chair, Associate Professor  
Department of Restorative Dentistry
